Course Description

7

- Intermediate computer programming, including elementary data structures such as linked lists, stacks, queues, binary trees.

Extended Course Description

8

- This course will **build upon** your introductory programming and design skills from **IT 168**.
- You will learn **new programming concepts**, such as **recursion**
- You will **expand** your understanding of object-oriented design
- You will be introduced to new tools for programming such as **several elementary data structures**: linked lists, stacks, queues, and binary trees.

Extended Course Description

9

- We will also continue to hone your **testing** and **debugging** skills.
- Programs will be both **larger and more complex** than in IT 168, growing as your skills are growing.

Objectives

10

1. Develop moderately complex computer programs.
2. Employ appropriate object-oriented program design and documentation methods including the design of appropriate OO classes and methods.
3. Implement and use elementary data structures such as linked lists, stacks, queues, and binary trees correctly.
4. Design test data and conduct varying levels of program testing.
5. Trace and write simple recursive methods.

Attendance

15

- Attendance is **expected**.
- You are responsible for **knowing everything covered** in every class meeting including announcements, corrections, assignments, etc.
- If you are **unable to attend** a class period, it is your responsibility to obtain the class materials and assignments.
- Do not count on everything being **announced** on ReggieNet.
